<ul style="list-style-type: none">Currently developing a <u>diffusion-based super-resolution</u> framework for unpaired infrared photothermal heterodyne images, aimed at overcoming the Abbe diffraction limit and mitigating scanning-resultant background artifacts.Proposed different novel methods leveraging <u>foundation models</u> (based on SAM and GPT) for medical image classification [6] and cancer survival outcome prediction. [2][5]Developed data efficient encoder-agnostic universal 3D segmentation models that improved performance on out-of-distribution datasets by up to 11%, with less than a 2% increase in model complexity. [1] [3] [8]Proposed a multimodal learning framework for automated sperm analysis handling label ambiguity [4] and a shape-aware segmentation method using implicit neural representations improving data efficiency by 30%. [7]Developed 3 <u>self-supervised learning</u> models achieving state-of-the-art segmentation performances. [9][10] [11]Mentored one high school student and three undergraduate students on machine learning projects, leading to several publications and successful placements in the industry.Collaborated with multiple biology labs, hospitals, and anthropology departments to address medical and biological research challenges using AI-powered tools, resulting in several publications.
